

Task Tracker

A task management web app for BITS Pilani, Hyderabad Campus

Created by Devang Navneeth Naik

Features

- E** Inline create, edit, and delete — no page reloads
- D** Native date picker for start and end dates
- P** Status & Priority dropdowns, auto-sorted High → Low
- %** Completion shown as a live progress ring
- F** Live search plus Status / Priority filters
- T** Light / dark theme, follows your OS

Technology

- B Backend**
Python, Flask, SQLite — raw sqlite3, no ORM
- F Frontend**
HTML, CSS, JavaScript — no framework, no build step
- D Storage**
tasks.db — SQLite file, auto-created on first run

Technical Architecture

Three-tier flow — browser, Flask server, and SQLite database

No ORM — Flask talks to SQLite directly through the `sqlite3` module.

Setup on Another Laptop

Cloning through VS Code — from a fresh laptop to a running app in 5 steps

1

Sign in to GitHub in VS Code

Repo is private — `Ctrl+Shift+P` → `GitHub: Sign in`

2

Clone the repository

`Ctrl+Shift+P` → `Git: Clone` → paste the repo URL

3

Install dependencies

Open the terminal and run `pip install flask`

4

Run the app

`python app.py` (or run `run.bat`)

5

Open it in your browser

Go to `http://127.0.0.1:5000`

Full walkthrough, plus fallbacks if a menu option is missing, is in README.md
